

Manure Management Publications for Livestock Operation Managers

Proper manure management is a priority for all livestock operations. To assist North Dakota livestock producers, NDSU Extension has a wide array of educational bulletins available. Below is a list of the more pertinent publications that beef producers can look to for help with feedlot design and management as it pertains to manure management as well as information for how best to utilize manure in cropping systems. The publications are all available online at the NDSU publications website http://www.ag.ndsu.edu/pubs/ag_natural-resources.htm under livestock production or water quality and pesticide information. If web accessibility is an issue, please contact your local county extension office to obtain a hard copy of these publications.

NM1155 Beef Feeding Operation Siting and Design Basics
